⌂ London, UK

SKILLS

DESIGN & RESEARCH

Figma · FigJam · Wireframing · Prototyping · CAD (Fusion 360) · Usability testing · Mixed-methods research · WCAG 2.2

BEHAVIOURAL SCIENCE

COM-B & the Behaviour Change Wheel · EAST · MINDSPACE · Nudge theory · Heuristics & biases · Dual-process theory

BUILD

React · Three.js · TypeScript · JavaScript · Python · Node.js · Tailwind CSS · Vite · D3.js · GLSL

DATA & APIS

Web Audio API · Spotify Web API · OAuth 2.0 · REST APIs · Analytics

SHIP

Git · Vercel · Netlify · Cloudflare Pages · Webflow

SUMMARY

MSc Design with Behaviour Science student at Imperial College London, combining five years of building for the web with training in how people think and make decisions. I design and code interactive experiences, from a real-time 3D audio visualiser to a terminal-style portfolio, and I want to use behavioural insight to build products people actually want to use. Seeking internships, part-time roles and graduate opportunities in product, UX and behavioural design, and creative technology.

EDUCATION

MSc Design with Behaviour Science — 2026 – Present

Imperial College London

- Applying behavioural science to the design of products, services and experiences.

BSc (Hons) Cybersecurity & Digital Forensics — First Class — 2020 – 2023

Staffordshire University London

- Research dissertation evaluating high-impact cyberattacks on the finance sector and proposing improved defences, including a custom-built monitoring tool.

PROJECTS

Spotify Particle Visualiser — React · Three.js · Web Audio API

- Built a real-time 3D audio-reactive visualiser that syncs live Spotify playback with GPU particle effects and Butterchurn (MilkDrop) presets.
- Wrote beat detection from FFT analysis of playback and microphone input, driving motion and custom shader effects.
- Integrated the Spotify Web API and Web Playback SDK with OAuth 2.0 for login and track data.
- Designed switchable retro UI themes, including Windows XP and Windows Media Player-style skins, using wireframes to balance nostalgia with modern responsiveness.
- Now using it as a case study for applying behavioural science frameworks to my own design decisions.

Pip-Boy Terminal Portfolio — React · Vite · Tailwind CSS

- Designed and built a retro-futuristic, command-line style portfolio with a custom command parser for interactive navigation.
- Iterated through wireframes and user testing to balance a strong aesthetic with usability; designed to WCAG 2.2 AA.
- Deployed on Vercel with a custom domain.

AVAILABILITY

Part-time roles during term · Summer 2027 internships · Graduate roles from late 2027

INTERESTS

Behaviour change · Recommendation systems · Human decision-making · Creative coding · Music visualisation

Modular Tool Carrier for Technicians

In progress · Fusion 360

Design Engineering Practice module, Imperial College London

- Designing a convertible carrier that lets a technician move tools between jobs in whatever form suits the trip: bike trailer, toolbox, backpack or wheeled suitcase.
- Self-initiated concept, currently in the sketching phase, testing form and conversion ideas through early prototype models.

Weather-Scrobble Mapper

Open-Meteo API · Data visualisation

- Built a tool that explores how mood, music and weather relate by matching personal listening history (scrobbles) against historical weather data.
- Grew out of a long-running interest in recommendation systems and how context shapes the choices people make.

EXPERIENCE

Freelance Web Developer & Designer

2021 – Present

Self-employed, London

- Design and build responsive websites for small businesses and artists using HTML, CSS, JavaScript and Webflow.
- Turn clients' brand ideas into working sites, balancing visual identity with usability.
- Build custom interfaces and dashboards with dynamic data, and set up analytics and SEO to track and improve engagement.

Data Centre Engineer

Nov 2023 – Oct 2026

Akamai, London

- Kept mission-critical infrastructure running in a high-security data centre for a global cloud and content delivery provider.
- Diagnosed outages through root cause analysis and turned findings into fixes and clear documentation.
- Built internal dashboards to visualise equipment uptime, using scripting and automation.
- Worked with engineering and operations teams to resolve incidents against tight service-level targets.

Bartender

Mar 2022 – Jul 2023

The Toucan, Soho · Gordon Ramsay Bar & Grill, Mayfair

- Delivered fast, attentive service in busy high-end venues, reading customers quickly and staying calm under pressure.
